

# SUMMER PRODUCT HIGHLIGHT

Does the idea of a barbeque or picnic fill you with dread? For millions suffering from heartburn, what should be an enjoyable time of relaxation can be a source of pain and discomfort. This summer, don't let heartburn be a showstopper!

- *Do you get heartburn after eating?*
- *Have you been diagnosed with GERD?*
- *Do you have Chronic Acid Reflux?*
- *Do you want a natural antacid solution?*

## *The Problem with Prescription Acid Blockers*

Prescription acid blockers operate on the assumption that an overproduction of acid is the cause of your acid reflux. Based on this idea, they work by blocking or dramatically slowing down the stomach's acid production, thereby minimizing the chance that acid can enter and harm your esophagus. To that end, they do their job- but at a dangerous cost to your health. Research has shown that chronic low stomach acid can lead to a wide range of serious diseases, including cardiovascular disease, type 1 diabetes, osteoporosis, rheumatoid arthritis, infections, asthma, allergies, skin disorders, and depression.

The natural ingredients in Heartburn Ease™ work synergistically to regulate acid production naturally while soothing the esophagus from the pain associated with acid reflux. Take Heartburn Ease™ along with treatments designed by your doctor to heal your digestive problems.

For a limited time, **save \$5.00** when you purchase two bottles!

Each bottle contains 180 capsules and is \$34.95.
